de-DE-Ruhrgebiet: Technik

Technology

Technology isn’t neutral. It carries the fingerprints of its developers, its users, its time. If you think software is just a tool, you’ve forgotten that tools shape worldviews too. **Swords, for example. Or even software.** Every line of code, every interface, every algorithm — they say something. **Not just about function. But about stance.**

These pages are an attempt to treat technology not as interface — but as expression. **Not as solution. But as question.** What gets shown? What stays hidden? What’s assumed?

This site runs on a self-hosted DokuWiki system – deliberately simple, deliberately transparent. No tracking. No algorithms steering attention. No hidden mechanisms. Just text, structure — and the chance to find your way without being led.

The technical choice isn’t random. It’s part of the stance:

- Self-determination over platform dependency
- Readability over design fetish
- Resonance over reach

AI here isn’t used as a substitute for thinking, but as a reflection partner. It helps condense thoughts, check phrasing, test cultural resonance — **but it remains a tool. Not an authority.** And sometimes, if you listen instead of just using it, it even manages to carry stance and the essence of language.

If you’re reading here, you should know:

- The infrastructure is built to support, not distract
- The content comes from stance, not from systems
- The technology is visible, but not dominant — like a quiet table where thoughts can meet

This site isn’t a project. It’s a place where thoughts are allowed to meet. And the technology? It steps back — **so stance can step forward.**
